the castle gate that morning.

in his living tomb.

"Here he is!"

execration.

The prison van was seen to cross the bridge, and as it came up to the gate, it was received with a howl of

PERSONS OF THE STORY

TOTOR STOWSLL—Chief Judge of the Inte of Man. In a moment of mutual passion he has to prest later pentience over the secret sin, had illicit relations with specific collister. A handsome seasus of the mutual passion of the mutual specific collister. A handsome seasus of the mutual specific collister. A handsome seasus of the mutual specific collisions of the mutual specific collisions.

minutes l'aubman seemed to glory in the exercise of his power.
"Prisoner at the bar." he said.
"you have confessed to the crime of breaking prison to effect the escape from custody of a young woman you had first debauched and then aban-

"It has been said on your behalf (strangely enough by the public ser-rant whose duty it was to arraign you) that your confession was voluntary. Nothing of the kind. It was made when the hand of the law was upon you, when the warrant for the arrest of an innocent man was about to be issued, and you were face to face with the certainty of exposure, and punish-

and you were lace to lace with the certainty of exposure and punishment."

"Ha!"

"It has also been said that the confession of your conscience. But your conscience would have been better employed when you sat in judgment on your own victim—a deliberate offense that is probably without precedent in the history of criminal jurisprudence.

"Finally it has been argued that your high position and family connections ought to mitigate your punishment. On the contrary, they ought increase it, as showing your disegard of your responsibilities, and especially your ingratitude to the head of the judiciary, his Excellency" (here Taubman bowed to the Governor). "whose favors you have so ill requited." "Ah!"

"Your crime is clear. It is without a particle of justification. You have disgraced your name, your profession and your island. Therefore the Court can only mark its sense of the enormity of your offense by inflicting the maximum penalty prescribed by the police through the open gate by the police through the police through

"Your crime is clear. It is without a particle of justification." You have diagraced your name, your profession and your island. Therefore the Court can only mark its sense of the enormity of your offense by inflicting the maximum negative prescribed by the law. imprisonment in Castle

Hardly had the last words been when the spectators broke into spoken when the spectators broke into frenzied shouts of approval. Neither the police nor the Judge made any the police nor the Judge made any attempt to repress them. The Governor rose hastily and hurried off the bench, and Taubman, gathering up his papers, his spectacles and his two walking-sticks, hobbled after him.

The shouting went on. It surged about Stowell as he stepped out of the dock and passed with slow stride through the door that led down to the prison. The deadened sound of it followed him while he descended the stairs. about Stowell as he stepped out of the dock and passed with slow stride through the door that led down to the prison. The deadened sound of it followed him while he descended the stairs, and when he reached the cell it mingled with yet wilder shouting from the streets, where a tumultuous crowd had been waiting for the werdier. The delight of the mob seemed delirious. Some women from the meaner streets by the quay were dancing on the pavement.

Meantime in his robing-room with the Governor. Taubman was congratulating himself on his travesty of justice. Taking his wig off his stubbly gray hair, he said: "The castle walls were low by the street, and off the shouldars of a comvision. The castle walls were low by the street will the foreign minister. It is expected the new cabinet will be composed almost entirely of English-speaking ministers. Indications are in the battlements. From that clevation he beguiled the time of waiting by conducting a chorus of his companions on the ground, using his steel for baton, he selected the crudest of the old Manx ditties, and amid shrieks of laughter, he emphasized the doubtful lines by frequent repetition.

The other class. consisting chiefly of was shocking the way Sto'll had bout Fall Government was considered doubtful lines were and extended to a combinate the presidency from which he was ousted in 1917, has proffered the was ousted in 1917, has proffered the was ousted in 1917, has proffered the child shout his waist. Early next morning Stowell was removed to Castle Rushen.

There was a rumor (probably inspired by the police) that he would travel by the 7 o'clock train; therefore, at half-past 6 the railway station and its approaches were full of a noisy crowd. But at ten minutes to seven the prison van, drawn by two horses, drew up at the back door under the court-house and Stowell was hustled into it.

"Come, get in, quick," said the "Here he is!"

"Come, get in. quick," said the chief constable (all his former deferaway, Stowell being shut up in the windowless compartment within, while the chief constable and his inspector of Police occupied the outer one with occupied the outer one with he grill.

Crossing a swing-bridge which spanned the top of the harbor, they climbed the lane to the head until they reached the cliff road, and had the town behind them under a veil of morning mist. morning mist, and the open sea in front. There had been wind overnight, and a fiery sun was blazing out of a fierce sky like the red light from the open door of a furnace.

Stowell, in his dark compartment, had not yet asked himself which way he was going. The feeling of exaltation, of doing a divinely appointed duty, which had buoyed him up during the trial, was now gone. The nullity of his past life, the hopelessness of the future had left him with the sense of being already a dead man. Two years inside the blind walls of the Castle Rushen, while the sun shone and the flowers grew and the birds sang outside, owers grew and the birds sang outside, world went on without himcould he live through it?

At length, having a sense of physical well as spiritual suffocation, he pped timidly at his door, and asked when it was opened, if it might re-main so for a few moments that he might have a breath of air.

"Certainly not." said the chief con-table, and he clashed the door back. "Better so," thought Stowell. He had caught a glimpse of the scene outside, and knew where they were on the rocky shelf along which he had driven with Fenella after the oath-

taking at Castletown.

The memory of that day came back to him like a stab. He could feel Fenelia's warm presence by his side. could see her gleaming eyes; he could hear her rich contraito voice as they sang together above the boom of the w and the cry of the sea-fowl

Love is the Queen for you and for me,
Salve, Salve Regina!"

Begin This Story Thursday

The van stopped with a sickening jolt, and he heard the inspector of police

crying:
"Stand back! Make way!"
Then there was a flash of daylight and the voice of the chief constable

and the voice of the chief constable saying peremptorily:

"Come, get out! He quick about it."

At the next moment he was on the ground with a roar of hourse voices and a rush of contorted faces around him. There were screams of lewd laughter and yells of merciless derision. Arms were raised as if to strike him. He felt himself being pushed and pulled by the police through the open gate and up the passage way to the portcullis.

portcullia.

The crowd, not yet appeared, tried to force their way past the jailer and his turnkeys as if to lynch him. But they were checked by an unexpected sight. A young woman, in the costume of a nurse; with heaving breast, quivering nostrils, and flaming eyes, rushed through the gate with outstretched arms to stop them.

They recognised her instantly, but it was not that alone that cowed them. There is something in a brave act which pierces the noisiest crowd to the core of its cruel soul. Certainly this crowd fell back and its uproar died down.

Then in a voice which vibrated with contempt and scorn, Fenella tried to speak to them.

"You—you—you—" she be-

"You you you " she be-gan, but further words would not come, and returning to the castle she clashed its iron-studded gate in the people's

its iron-studded gate in the people's faces.

The crowd broke up rapidly and slank away, subdued and ashamed.

"Morning. men!"

"Morning!"

Within two minutes nearly all were gone. The open space in front of the castle gate was empty, save for two old women with little black shawls over their heads, who were wiping their eyes on their cotton approns.

on their cotton aprons.

"Did thou see that, Bella?"

"Deed I did, though,"

"I belaye in my heart it was the girl herself—the one they say he has done so bad to." "Aw well, if a woman isn't willing to stand up for her man whatever he has done what is she anyway?"

RADIO IN THE HOME

sected as the cells are in the upper il

Thus connecting electrical batteries in "series" adds the voltage, but does not affect the amperes.

Live We Use Storage and "B" Batteries

In the last article we said that volts in electricity might be likened to the "head" of water in a pipe from a tank—in other words, the distance it falls, which governs the pressure behind it. So volts mean pressure of electric force.

Amperage, we said, was like the size of the pipe in the water system, and is, for practical purposes of explansis, for practical purposes of explansition, a measure of the quantity with—the last cells has a certain amperage. In the ordinary dry cell of this

is, for practical purposes of explana-tion, a measure of the quantity with-out reference to the force behind it. The ordinary dry cell, of which you will find eight in the picture accompanying this article, has a pressure or force of one and a half volta between

nected as the cells are in the upper illustration, the amperage is not affected, but the voltage is added, just as
it would be in a water system if the
pipe going from the attic through the
different floors to the cellar were all
one and a half inches in diameter. The
stream which came out of the spigot in
the cellar would have the full flead of
the tank, but would still be only one
and a half inches in diameter. torce of one and a half volta between the positive binding post and the negative binding post. To use our watersupply illustration, the positive post might be called the tank in the attle find the negative post might be called the spigot from which the water is drawn, and the voltage is like the "head" of the water.

As we have the foundary and the called the spigot from the called the water.

As we have the four dry cells connected in the upper picture—we call this connected in "series"—it might be affect the amperes.

The four cells just below the upper ones are connected in what we call "parallel" or "multiple"; that is, all the positive binding posts are connected to each other and all the negative binding posts are connected with each other. We can illustrate the effect of this by again considering our water system and remembering that in the upper illustration we used each cell to reprelikened to the water system through the various floors of the house. The first

Today's Programs

(Strawbridge & Clothier)

1:16 P. M .-- PUBLIC LEDGER radio nev bulletins.

\$:30 to 4:30 P. M.—Concert by the Straw-bridge & Clothier Male Quartet (John Owens, Ednyfed Lewis, Harold Simonds and John Vandersloot). A varied program, including vocal and instrumental soles.

\$:30 to 6 P. M.—Baseball scores.

sent one story of the house. Joining them in series gives you the force of all four stories. Joining them in parallel means that we go only one floor below the tank, but, instead of taking all the water through one pipe, we use four pipes and open them all at once. This means that, while the force of water as it leaves the spigots is not very great tecause it has flowed only one story, we are getting four times as much water because we are using four pipes. Thus connecting electric batteries in parallel adds the amperage or quantity, but leaves the voltage, or force, the same. 13 ATHLETES GRADUATE FROM ST. JOSEPH'S PREF Who Will Receive Diplomas Thirteen is an unlucky number—especially for the athletic teams at the story, we are getting four times as much water because we are using four pipes. Thus connecting electric batteries in parallel adds the amperage or quantity, but leaves the voltage, or force, the same.

The great difference between a storage battery and a dry cell is that, in the storage battery, the electricity is made by a combining of various chemical elements which are in the solution, and the advantage is that when these elements are all combined and there is no more electricity to be made, we can introduce a charge of electricity from an cutside source into the solution, and this breaks the elements up again into their original form until, when the battery is fully charged, all the elements are prepared, when called upon, to start combining all over again, and thus make more electricity.

The usual storage battery has a force

The usual storage battery has a force or power of six volts, and the different sizes are rated in "ampere-hours"—that is, the number of hours for which the battery will deliver a steady current with the quantity of one ampere. Dry cells, which are of about thirty-ampere capacity, will really not deliver an ampere for thirty hours on a sleady flow. They are built for frequent peri-ods of short service and, once they are discharged, they cannot be recharged. discharged, they cannot be techarged.

So we use a storage battery for the
steady lighting of our audion bulb.

The "B" battery is simply a collection of small dry cells usually all
mounted into a block of some insulating material. They are connected to
the part of the audien bulb known as
the plate, and the operation of the
plate, while requiring a high voltage requires very little amperage—in fact,
only about one-fiftieth of an ampere.

In our water illustration it might alperage. In the ordinary dry cell of this type there are thirty amperes. Con-

In our water illustration it might elmost be likened to a tank placed at the
top of the Eiffel Tower, but connected
to the ground by a pipe only the size of
the tube of a thermometer. Cappright, 1922, by Public Ledger Company
